Field Operations and Technical
Support Branch

We are requesting field support for the Greenacres Landfill site in Spokane County, Washington. Some field investigation work to prepare a remedial investigation is needed. In consultation with DOE, we agree that some groundwater monitoring is probably required before the extent of the problem can be defined and development of remedial activities can begin.

Preliminary site visits and limited well data have indicated that an old county township dump (closed) may be the cause of solvent contamination in a private well drawing water from the Spokane aquifer (sole source).

This request for assistance has a medium priority with a proposed time schedule of beginning the work in the fourth quarter, FY 84. Please contact me (X-7177) for further discussion on this site and the possible work schedule.
